

North Star - Start Here

North Star

- i** Goal: For the prod. SQL Server estate, achieve a recoverable state of **≤2-hour RTO** and **≤15-minute RPO** under an infrastructure-failure / site-loss event per EC2 node

Why this matters

1. Recovery Time Objective (RTO)

- Current state: Time to restore service is **3 working days** for a single SQL Server node in a 3-node cluster.
- Impact: We have 58 clusters/PDs in EMISWeb Eng alone; a widespread event (e.g., ransomware) could cause an unacceptable outage.

2. Recovery Point Objective (RPO)

- Current state: Overnight gap of **6–9 hours** with no transaction log backups (approx. 9pm–3–6am).
- Impact: A multi-node failure (as seen in ransomware events) during this window could result in permanent loss of several hours of data (overnight change is reduced but not nil).
